The plant cell has a cell wall. The cell wall is thick and provides support for the plant cell. It is much more rigid. Entering the plant cell is harder as a result of this. Animal cells only have a cell membrane, so materials can enter more freely. The cell is the lowest level of structure capable of ... specific cell components/organelles for functional analysis = biochemical studies. Microscopes are a major tool in cytology = the study of cell structures. Cytology coupled with biochemistry, the study of molecules and chemical processes in metabolism, developed modern cell biology.
